

ONE YEAR TRAINING PROGRAMS

UNIVERSITY OF PITTSBURGH | SCHOOL OF MEDICINE | DEPARTMENT OF MEDICINE

PRELIMINARY YEAR

Offers an enriching year of internal medicine training, nearly identical to the categorical internship year, which thoroughly and comprehensively prepares trainees for their future specialty of choice. In addition to sharing the same program director as their categorical colleagues, preliminary year residents have the same ready access to a wide variety of inpatient and outpatient electives, as well as other educational opportunities including daily conferences, weekly intern reports, monthly evidence-based medicine conferences, morbidity and mortality and clinical reasoning conferences, among many others. These residents also benefit from individualized mentorship from the Internal Medicine Program's Chief Medical Residents. Overall, the preliminary year affords an optimal balance of educational rigor and flexibility to tailor one's intern experience. Our graduates leave our program with a strong internal medicine foundation that serves them very well throughout their future training and careers.

TRANSITIONAL YEAR

The UPMC Medical Education Transitional Year Program (TY) offers a rigorous, yet flexible, one-year training experience to prepare you for your advanced program and future career in medicine. Through individual mentoring our program promotes both your personal and professional growth. Wellness retreats, quality and safety projects, leadership opportunities and monthly TY meetings add to the overall experience. Residents develop personal learning goals with Dr. McCausland initially and then quarterly. TY's benefit from the infrastructure of the categorical programs within which they rotate and are fully integrated while working with their categorical counterparts. Our teaching faculty focus on education including evidence-based medicine, clinical reasoning and numerous other conferences. Electives are tailored to a TY's advanced specialty whether surgical, medical, research or clinically focused. Our TY's are expertly prepared for their destination specialty.

For continuity of training at UPMC, NRMP tracks with both the UPMC Medical Education Radiology and Physical Medicine and Rehabilitation programs exist.
